Version 16.2.0 Release Notes
12/17/2018

About/Contact Info

Version 16.2.0 is the latest update to the MicroBiz for Windows. For release notes on a previous release of MicroBiz for Windows, please check our updates page online (https://microbiz.com/windows-support-release-notes/).

You can reach us through our website at **www.microbiz.com** or by phone:

- **Technical Support:** 702-749-5353 Option 1

- **Sales:** 800-929-8324 Option 2

Before Installation

- Please familiarize yourself with the contents of these release notes for details regarding this version of MicroBiz, including any limitations.
- You must be on MicroBiz for Windows version 9.0 or above to apply this update. Please call our support group to arrange a manual update if you are on a version older than version 9.0.
- As with any change to your MicroBiz system, it is very important to complete a backup of your local and system files paths (BizWin and Business directories by default) prior to beginning an upgrade.

Highlights

Please view the list below for more information on fixes and improvements added to v16.2.0

Bug Fixes

The following issues have been addressed in this release:

- LDATETEMP message shown when loading or saving an IIP – this issue should no longer present itself in this release

- Previous Customer information being saved to the front register for a Reprint – The system will ensure a clear of the front register is performed before running a reprint using the RP feature

- 40-Column Closeouts present Debit Card sales in the wrong area, this has been moved to be included with the rest of the Credit Card sale figures.

- Hotkey of Alt+N opened to a webpage instead of advancing to the next page. This has been updated in this version to advance instead of opening the webpage as it did in previous versions.

Improvements and Enhancements

Improvements to version 16.2.0 of MicroBiz are as follows:

- Updated the system to monitor the Cash_Tra table and restore data that has been erroneously deleted. A message will also be sent out automatically to our development team indicating that the error occurred.

- Coupon Program addition – You can now create a coupon based on a Dollar off amount. This dollar off will be applied to the total so the item sales reports remain accurate. You can also report on the coupons used within Sales Reports. *Percentage Off to be added on the next version!

- Invoice Type Selection has been simplified and enhanced with options that you can enable for the invoice selected rather than having to choose a different invoice type to get this option on the invoice.

- Zebra/Eltron Label printing has been updated to allow field selection on your label including your Shop Name as well as Size / Color / Style / Vendor Name. You can also choose the barcode type in case your barcode scanner cannot read the default of Code 39. Along with this you now have the ability to control the start position of the printed description and barcode on the label to ensure you can print labels without fields printing off the label.

- MicroBiz ShowMyPC has been updated to always download the latest version from the website microbiz.showmypc.com and run like you currently experience. This should make it just as easy to use and always provide you with the most recent version of this utility to run.
